

Seat Belt Reel and Guide Installation Instructions

This applies to all year models. Remove enough material from the web of the shoulder harness guide to allow it to rotate as far forward as possible, until the loop hits the bar. Remove metal from the side only as shown in the photo so as not to weaken the guide.

'94 - '00 seat belt reels. With the seat belt reel pulled away from the car remove the 2 pop rivets that hold the upper bracket to the reel and remove the bracket. This will prevent the reel from being wedged behind the bar causing the belt to retract slower. On the early models and '00 up simply bend the small tab on the upper bracket down flat to allow the reel to lean inboard for better belt alignment.
